Activity 1.1 - Learning Highlights

Why requirements gathering is important?

If you misunderstand what stakeholders need, it could lead to serious issues in your project, like increased costs, malfunctioned features, or, even worse, a failed system.

Stakeholder Identification: Anyone who has an interest in a project.

Elicitation techniques:

- **Interview**: Good for in-depth discussion
- **Focus** Group: Good for group discussions
- **Survey**: Easy for a large group
- **Workshop**: Interactive session with other stakeholders

Challenges in Requirements Gathering: There must be many requirements, so we need to prioritize. With MoSCoW technique, we can easily decide what requirements should be implemented first.

Domain-Specific Considerations: Not all projects are the same, and different industries have specific challenges. This means that when gathering requirements, you have to adapt your techniques to fit the specific needs of that domain.

Conclusion:

This activity helps me the basic of gathering requirements, including identifying stakeholders and selecting suitable elicitation techniques. Gathering requirements is a key to be successful with your project, it brings more information of each stakeholder and make your project more perfect.
